CM3 Thinning potential

This map shows areas of thinning approved under the existing Larch Removal Plan. It also highlights where additional thinning may take place, based on site conditions, forest inventory data and past management. Areas may be thinned to support tree growth or remove certain species for environmental and/or tree health reasons.

Note: not all areas shown will necessarily be thinned within the next ten years. More thinning areas may also be added if suitable sites are identified as part of the detailed planning process. Potential thinning areas will be refined as the LTP develops, taking account of stakeholder feedback.
