Previously unplanted field currently under grazing
New planting provides an opportunity to increase the productive area.
Loss of grazing land with wider site timber access still required.

Extensive field drainage system
Previous drainage allows more productive area.
Drainage system hinders naturalistic crop design.

Single track unclassified road bisects the site
Good access to deliver the site.
Limited scope for future timber access.

Buried private water supply feeding neighbouring properties crosses our ownership, no other utilities are present.
Limited utility infrastructure increases productive area.
Suitable water supply buffer required to protect pipe and reduce impact on neighbouring properties.

Deep peat areas
Retain areas of priority open habitat.

Remnant field boundary hedgerow and beech trees
Retaining these features enhances habitat value.
Field boundaries hinders naturalistic crop design.

Views of the site are only significant at the small scale i.e. from the public road and from surrounding properties.
Opportunity to maximise productive area with limited landscape impact.
Consideration of neighbouring properties must be made reducing productive area.
