

## Appendix 6: Comparison with Previous Plan

This section compares the felling, proposed and actual, of the previous 2010 plan with the felling proposed this plan. This is also illustrated in *Map A – Analysis of Previous Plan*.

Firstly, please note that the figures in this section represent the *gross* clearfell areas and are therefore higher than areas quoted elsewhere which are *net* areas. Gross figures have been used here by necessity because of the way the historic (felled) coupe areas had to be calculated using GIS. For this reason *Table 1* below should only be used in conjunction with *Figure 1* below and not be compared to other tables and figures elsewhere in this plan.

Secondly, note that the chronology of phases shown in *Table 1* and *Figure 1* has been “smoothed” for presentation purposes. This is how the 2010 phases, Felling Permissions and new plan period merge:

- 2010 Plan Phase 1 (approved): 2010-2015
- Phase 2 (approved): 2015-2022 (includes a 2 year extension to complete felling of Phase 2 coupes)
- Phase 3 (not approved): 2022-2025, equivalent to the FPA period
- Phase 4 (not approved): 2025-2030, equivalent to this plan period

Phase 1 felling was higher than originally planned due to additional felling approved via plan amendments to deal with windblow. Phase 2 felling was slightly lower than originally planned due to some approved clearfell coupes not being felled. The area felled in Phase 3 is unusually low because this is the period between approved plans, when the only felling taking place was via Felling Permissions. The gross area proposed for clearfelling in this plan is higher than that indicated in Phase 4 of the 2010 plan, but this is more than offset by the low total in Phase 3.

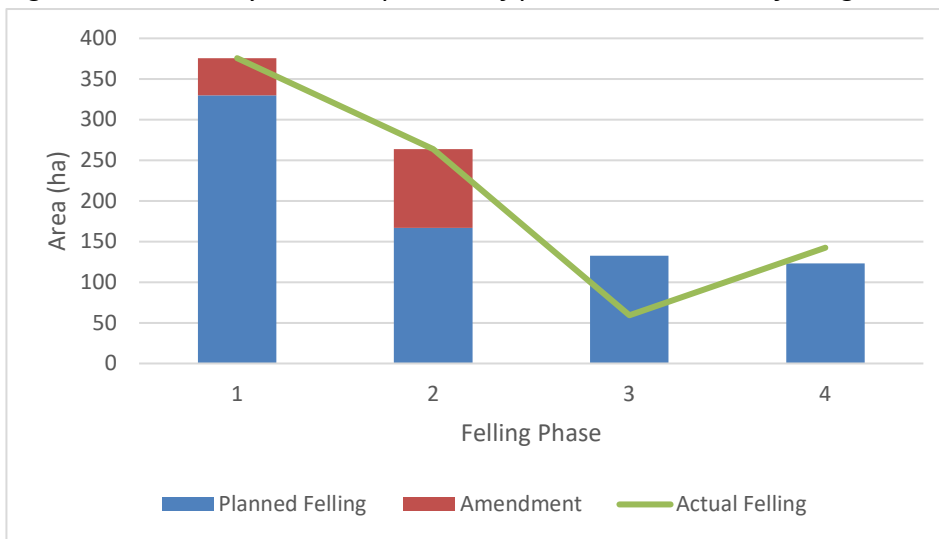

Table 1 – Summary and comparison of clearfelling by area (ha) since 2010

Previous plan clearfell areas (ha)				FPAs & this plan areas (ha)		
Felling Phase*	LMP	Amendment	Previous Plan Total	Felling Permission	New Plan Total	Difference (New - Old)
1	329.8	45.8	375.6			
2	167†	96.9	263.9			
3	132.6		132.6	59.3		-73.3
4	123.2		123.2		142.3	19.1

\*Felling phases in this table correspond to the previous 2010 plan; see text for explanation.

†Note that in the 2010 Plan Phase 2, 122.7ha of approved clearfell coupes were not felled.

Figure 1 – Summary and comparison of planned and actual felling since 2010\*

\*Note that “Actual Felling” line shows gross areas (ha) actually felled except for the Phase 4 total, which is the gross clearfell area proposed in this plan.
